FRENCH CYBER & FINTECH TOUR BENELUX 2025

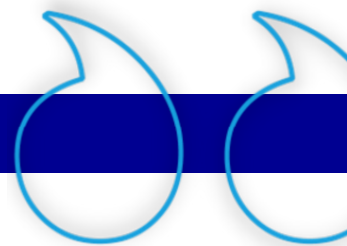

LUXEMBOURG, BELGIUM, NETHERLANDS

LUXEMBOURG - NOVEMBER 11TH
BRUXELLES - NOVEMBER 12TH
AMSTERDAM - NOVEMBER 13TH

Supported by Business France, the Chambers of Commerce and Industry, and Bpifrance, Team France Export brings together the best public and private sector solutions to facilitate and accelerate your international development.

At every stage of your export project, you benefit from levers tailored to your strategy, ambitions and resources.

BUSINESS FRANCE

Business France is a **public consulting firm** that **supports the international development of the French economy** by supporting businesses in their international development and **enhancing the country's attractiveness to foreign investors.**

It promotes French companies, brand image and France's attractiveness as an investment destination, and also manages the **international corporate volunteering programme (VIE).**

Business France has 1 500 employees in France and 58 countries around the world, working with a network of partners.

Since January 2019, as part of the reform of the public export support system, Business France has entrusted private partners with the responsibility of supporting French SMEs and mid-sized companies in the following markets : Hungary, Morocco, Norway, the Philippines and Singapore.

 Aduneo - LINKEDIN

Aduneo is a **French cybersecurity specialist** with **over 20 years of expertise in Identity and Access Management (IAM-CIAM)**.

We provide **comprehensive IAM services to both private and public sector clients**, addressing the full spectrum of identity challenges including directories, lifecycle management, federation/SSO, authentication/MFA, PAM, or IGA. Our expertise extends to **infrastructure security across on-premise, cloud, and hybrid environments**, encompassing CIEM, secure web application development, and API security. We partner with our clients throughout the entire project journey—from initial audit and strategic consulting through integration, deployment, training, ongoing maintenance, and support. Our team has deep proficiency with leading **solutions from both international and European vendors**, including Microsoft, SailPoint, Ping Identity, One Identity, Saviynt, Memory, Wallix, and Evidian, as well as Open Source platforms such as Keycloak and OpenAM. Additionally, we have developed Neo-ID, our proprietary unified identity repository solution that delivers cost-effective, powerful, and highly adaptable capabilities for environments ranging from straightforward implementations to complex enterprise architectures. Today's evolving enterprise landscape—characterized by **multi-cloud adoption, the extension of information systems to external identities, and heightened focus on regulatory compliance and digital sovereignty**—presents unique challenges. We leverage our extensive expertise to help organizations navigate these complexities and transform identity into a strategic advantage for their success.

Cogiceo

 [Cogiceo - Website](#)

 [Cogiceo - LINKEDIN](#)

Cogiceo is an **independent European cybersecurity audit company, specializing in penetration testing, RedTeam operations, and Active Directory security**. Cogiceo is a **registered Trust Service Provider** in the category Cybersecurity audit service providers (**PASSI**), at the highest levels and therefore accredited to operate on Information Systems of Critical Importance (SIIV) and Operators of Critical Infrastructure (OIV). These services include : **Penetration testing, Configuration audit, Source code audit, Architecture audit, and Organizational and physical security audit**.

On top of its services, Cogiceo has developed Sec4AD, the most comprehensive **Active Directory vulnerability scanner**. With its unmatched depth of analysis, Sec4AD identifies vulnerabilities down to domain member servers, avoiding the false sense of security provided by a simple LDAP analysis. Without interconnection or local agent, Sec4AD allows for prioritizing remediation by criticality, and monitoring of the Active Directory security status to avoid accidental regression.

EYAKO
SECURITY MADE SIMPLE

Eyako is an **all-in-one SaaS platform** built by CISOs for CISOs, empowering organizations to manage every aspect of cybersecurity: **governance, risk, compliance, incident response, vulnerability management, third-party security, privacy (GDPR), projects, and more.**

Modular and user-friendly, Eyako simplifies and centralizes cyber governance, ensuring **compliance with major standards like ISO 27001, NIS2, and DORA.**

Eyako – Cybersecurity that works for your organization.

Filigran

Filigran is a cybersecurity **software vendor providing advanced solutions for threat-informed defense.**

Its XTM (Extended Threat Management) suite of products combines two open-source technologies:

- OpenCTI, a leading **platform for cyber threat intelligence management and analysis**, to structure and operationalize holistic threat intelligence at technical, operational, and strategic levels, enabling security teams to **contextualize threats and proactively respond to**
- OpenBAS, a platform for **simulating and assessing attack scenarios**. Helps **identify critical security gaps and strengthen organizational security** posture through advanced attack simulations, resilience testing, and crisis management exercises.

Together, they enable organizations to **centralize intelligence, understand evolving threats, and continuously test and adjust** their cyber security posture.

With Filigran and its community-driven model, combined with enterprise-ready features and native integration with threat simulation, you will transform CTI from a passive reporting function into an active security operating system.

Manage vulnerabilities, not spreadsheets. **Hackuity automates your Vulnerability Management (VM) to cut through the noise and remediate your critical threats.** Empower your Vulnerability Operations Center (VOC) to patch what matters – faster.

Available via cloud, hybrid, and on-prem deployment, the Hackuity platform :

- Centralizes, normalizes, and harmonizes 100% of vulnerabilities
- Deduplicates vulnerabilities aggregated across 100+ market-leading scanners and tools
- Reduces CVSS noise by 99%
- Prioritizes your top 0.1% of remediation actions with our proprietary risk-based scoring algorithm
- Automates 70% of end-to-end VM operations via integrations with ITSM, SOAR, GRC, etc.
- Reduces Mean Time to Remediate (MTTR) for critical patches by x3
- Eliminates false negatives (incorrectly deprioritized vulnerabilities)
- Delivers attack surface-specific vulnerability intelligence
- Breaks security silos with a unified view of your cyber exposure, from SecOps to C-suite

Focus on the threats that matter. When 80% of attacks use a vulnerability published half a decade ago, it's clear cyberdefenders can't keep up on their own. Fragmented teams, too many tools, and 250,000 CVEs are a match made in heaven – for attackers. Founded by experts from leading cybersecurity service providers, Hackuity reinvents Risk-Based Vulnerability Management (RBVM).

BERGERET Marie

Sales

marie.bergeret@hogo.eu

[Hogo - Website](#)

[Hogo - LINKEDIN](#)

We have developed **white-box solutions** that **allow data to be transferred from an uncontrolled device to a safe device or a network share.**

Hogo provides you with integrated solutions to **secure your information system.**

Our white stations are CSPN - First Level Security Certification - certified by ANSSI. Our mission is to **protect industries and public services** from threats related to removable USB storage devices. Our hardware protects your users from threats related to USB removable storage media. This protection covers all attacks via USB media: malwares, badUSB (RubberDucky...) or USBKiller.

- Mobile tablet with 8 inches touchscreen (certified IP67)
- A single-block workstation with integrated 13 inches touchscreen
- Totem with 22 touchscreen (station is the solution offering the greatest visibility)
